

Starting a Local Web Server

ohhh noo this sounds hard but is it?

Windows

- if your on windows then you are going to need to install python i would suggest doing this using the all mighty chocolatey
 - <https://chocolatey.org>

Alrighty a way we go

1. You need to open a terminal (In VS code you can open one directly in it) and then navigate to the directory that has the .html file you trying to load
2. you either run

```
python -m http.server
```

JavaScript ▾

or

```
python -m SimpleHTTPServer
```

JavaScript ▾

3. open up the browser and type

```
http://localhost:8000/test.html
```

JavaScript ▾

here test.html was the name of my .html file you can replace it with whatever your file is and it will load.

HAVE FUN!!!!
