File Structure

dist

This is where all code that is ready for distribution should be placed. Every file in dist's sub-directories should have passed extensive testing and should be minified.

dist/port-beer

- Any minified Web Components that were built using the lit-element library should be here, as well as any scripts these components rely on.

dist/raw-beer

- Any minified files that were built raw should be here, as well as any scripts these components rely on.

docs

Auto-generated documentation of any .js file in the src directory will automatically be placed in this directory after running

```
npm run docs:build
```

icons

All images and icons that might be shared between multiple Web Components should be placed in this directory.

src

This is the directory where the non-minified Web Components and any styling a web-component uses will be placed. Each Web Component should have its own respective directory containing its' Javascript code.

src/port-beer

- web-components built using lit-element are located here.
- Each new component should in its own folder

src/raw-beer/

- web-components built raw are located here.
- Each new component should be in its own folder

test

All test-cafe .js files and the .html and .css files these tests rely on should be in the test directory.

website

This is where the team website is located.
